

Identification of subclasses of children with speech sound disorders using the PCC, PWP Intersect

Alycia Cummings & Alexia Larson
University of North Dakota

Children with speech sound disorders (SSD) have an impairment in acquiring and using the phonology of a language

- NOT due to lack of control of speech articulators
- 5-8% of all children
 - 80% require intervention
 - 99% of school SLP caseloads

(Bernthal et al., 2012; Gierut, 1998; NIDCD, 1994; Shriberg et al, 1999; Smit et al., 1990)

2

Percent Consonants Correct (PCC) is a measure of consonant production accuracy

- Number of consonants produced correctly divided by the total number targeted

$$\text{PCC} = \frac{\text{Correct Consonants}}{\text{Total \# of Consonants}}$$

(Shriberg, 1993; Shriberg et al., 1997; Shriberg & Kwiatkowski, 1982)

3

The Proportion of Whole Word Proximity (PWP) is a measure of whole word accuracy

- Phonological Mean Length Utterance of target words (Target pMLU)
 - Consonants = 2 points
 - Vowels = 1 point

$$\text{Target pMLU} = \frac{\text{Consonants}(2) + \text{Vowels}}{\text{Total \# Words}}$$

(Ingram, 2002)

4

The Proportion of Whole Word Proximity (PWP) is a measure of whole word accuracy

- Phonological Mean Length Utterance of child's productions (Child pMLU)
 - Correct Consonants = 2 points
 - Substituted Consonants = 1 point
 - Vowels = 1 point

$$\text{Child pMLU} = \frac{\text{Correct Consonants}(2) + \text{Substituted Consonants} + \text{Vowels}}{\text{Total \# Words}}$$

(Ingram, 2002)

5

The Proportion of Whole Word Proximity (PWP) is a measure of whole word accuracy

$$\text{PWP} = \frac{\text{Child pMLU}}{\text{Target pMLU}}$$

(Ingram, 2002)

6

There tends to be a linear relationship between PCC and PWP scores

						PCC	PWP			
glasses	glæsɪz	g	l	æ	s	ɪ	z	4	10	
	dætɪd	d		æ	t	ɪ	d	0	5	
vacuum	vækjʊm	v	æ	k	j	u	m	4	25	
	fæku	f	ɑ	k		u		1	5	
knife	nɑɪf	n	ɑɪ	f				2	5	
	nɑs	n	ɑ	s				1	4	
pajamas	pədʒæməz	p	ə	dʒ	æ	m	ə	z	4	11
	pɪdæmɪd	p	ɪ	d	æ	m	ɪ	d	2	9

7

PCC, PWP Intersect characterizes the interaction between consonant production accuracy and word complexity

- Assumption: higher accuracy for shorter, less complex words
 - Linear relationship between accuracy and complexity
- Categorize word complexity levels
 - Singletons, clusters, syllable length

(Babatsouli, Ingram, & Sotiropoulos, 2014; Knodel & Ingram, 2012; Purinton & Ingram, 2014)

8

PCC, PWP Intersect: Linear Pattern

9

PCC, PWP Intersect characterizes the interaction between consonant production accuracy and word complexity

- Assumption: higher accuracy for shorter, less complex words
 - Linear relationship between accuracy and complexity
- Categorize word complexity levels
 - Singletons, clusters, syllable length
- Children with SSD: Screening utility?
 - Linear PCC, PWP Intersect = Delay
 - Nonlinear PCC, PWP Intersect = Disorder

(Babatsouli, Ingram, & Sotiropoulos, 2014; Knodel & Ingram, 2012; Purinton & Ingram, 2014)

10

Study Question

- Can subgroups of children with SSD be identified based on their PCC, PWP Intersect patterns of words from the Nonword Repetition Task (NRT; Dollaghan & Campbell, 1998)?

11

Characteristics of TD Children and Children with SSD

	TD (n=24)	SSD (n=24)
Assessment Age: Mean (SD)	5.11 (1.18)	4.87 (1.15)
	t(46)=-0.735, p > .46	
GFTA-2 Standard Score	106.00 (6.83)	69.17 (11.93)
	t(46)=-13.125, p < .0001	
GFTA-2 Percentile Score	54.54 (18.49)	6.83 (4.99)
	t(46)=-12.202, p < .0001	
GFTA-2 Raw Score (i.e., number of errors)	8.67 (8.71)	38.21 (13.87)
	t(46)=8.838, p < .0001	
Leiter-R Standard Score	117.18 (11.91)	109.39 (14.83)
	t(32)=-1.520, p > .11	
TELD-3 SLQ Standard Score	110.94 (12.06)	101.29 (14.14)
	t(38)=-2.237, p < .04	
PPVT-IV Standard Score	113.13 (12.48)	106.21 (9.31)
	t(46)=-2.176, p < .04	
Hearing	Within normal limits	Within normal limits

12

The NRT words were divided into 4 categories based on word length

Easiest

Hardest

- One syllable: 4
 - naɪb, vɔʊp, tɑʊʒ, dɔɪf
- Two syllable: 4
 - teɪvək, tʃʊvæɡ, vætʃaɪp, nɔɪtɑʊf
- Three syllable: 4
 - tʃɪnɔɪtɑʊb, nɑɪtʃəʊvɜɪb, dɔɪtɑʊvæb, teɪvɔɪtʃaɪɡ
- Four syllable: 4
 - vɜɪtɑɪtʃaɪdɔɪp, dævɔʊnɔɪtʃɪɡ, nɑɪtʃɔɪtɑʊvub, tævɔɪtʃɪnaɪɡ

(Dollaghan & Campbell, 1998)

13

Procedure

- NRT words pre-recorded on computer
- Children asked to listen and repeat what the “alien” said
- Children’s productions were recorded
- NRT words narrowly transcribed off-line
 - 94% reliability
- PCC and PWP values were calculated

14

Subgroups of children were created based on their PCC, PWP Intersect patterns

- Linear
 - 1 syll \geq 2 syll \geq 3 syll \geq 4 syll

15

Linear PCC, PWP Intersect

16

Linear PCC, PWP Intersect

17

Subgroups of children were created based on their PCC, PWP Intersect patterns

- Linear
 - 1 syll \geq 2 syll \geq 3 syll \geq 4 syll
- Nonlinear
 - Any longer word category more accurate than a shorter word category
 - 2 syll > 1 syll
 - 3 syll > 2 syll

18

Nonlinear PCC, PWP Intersect

19

Nonlinear PCC, PWP Intersect

20

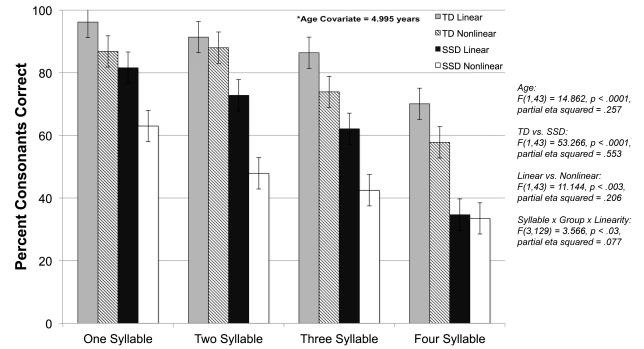

Children with Linear Intersect patterns tended to produce nonwords more accurately

- TD children
 - 12 Linear
 - 12 Nonlinear
- Children with SSD
 - 11 Linear
 - 13 Nonlinear

21

Children with Linear Intersect patterns had significantly higher nonword PCC scores

Children with Linear Intersect patterns had significantly higher PWP scores

23

Across both TD and SSD groups, children with Linear Intersect patterns had slightly higher GFTA Standard Scores

24

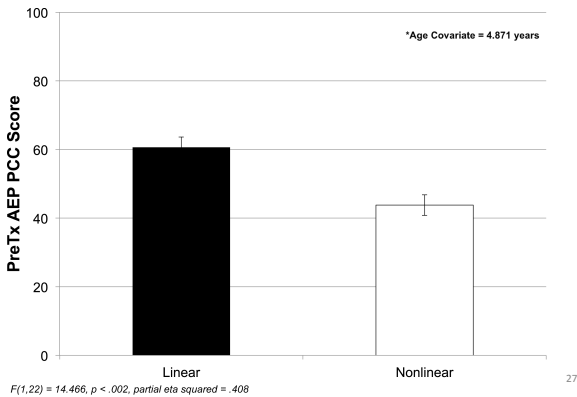

Children with SSD with Linear PCC, PWP Intersect patterns had higher GFTA Standard Scores

Children with SSD with Linear NRT Intersect patterns had higher production accuracy on the AEP speech probe

Children with SSD with Linear Intersect patterns had significantly higher AEP PCC scores

Functional extension of NRT PCC, PWP Intercept analysis: Prediction of GFTA Standard Scores for all children

- One Syllable PCC
- Two Syllable PCC
- Three Syllable PCC
- Further assessment needed
- Possible SSD?

Summary

- Can subgroups of children with SSD be identified based on their PCC, PWP Intersect patterns of words from the Nonword Repetition Task (NRT; Dollaghan & Campbell, 1998)?
 - Yes!
 - Children with linear patterns had higher production accuracy
 - GFTA & AEP
 - Two-syllable NRTs predict GFTA performance
 - Clinical potential of PCC, PWP Intersect and NRT?
