

GEOCOD

GEOMATICS FOR THE SUSTAINABLE MANAGEMENT OF FISH STOCKS

LA GEOMATIQUE AU SERVICE DE LA GESTION DURABLE DES STOCKS DE POISSONS

Overview

Rodolphe Devillers

Geography, Memorial University

GeoCod

- Two years project
 - January 2006 → December 2007 = very short!
- ~ \$250,000 (cash + in-kind)
- (short-term)-Research (undergraduate/graduate students)
- Develop a “big picture” of the evolution of fish stocks and their relationships with environmental changes in the North-West Atlantic region

Researchers

- Four Canadian researchers
 - Rodolphe Devillers – Geography – MUN (*Project Leader*)
 - Mir Abolfazl Mostafavi – Geomatics – Laval (*Deputy Leader*)
 - Marie-Josée Fortin – Zoology – U. of Toronto
 - George Rose – Fisheries Conservation Chair – MI/MUN
- Two International researchers
 - Stewart Fotheringham – National Center for GeoComputation – Ireland
 - Geoff Meaden – GIS Fisheries Unit – England

Partners

- Canadian Centre for Fisheries Innovation (CCFI)
- CIDCO - Center in Marine Geomatics (Rimouski)
- Fisheries and Aquaculture Newfoundland (DFA)
- Fisheries and Oceans Canada (DFO)
- IFREMER (~ French DFO)
- St-Lawrence Observatory (SLO)
- World Wildlife Fund (WWF)

Region of Interest

GEOMATICS FOR THE SUSTAINABLE MANAGEMENT OF FISH STOCKS

LA GEOMATIQUE AU SERVICE DE LA GESTION DURABLE DES STOCKS DE POISSONS

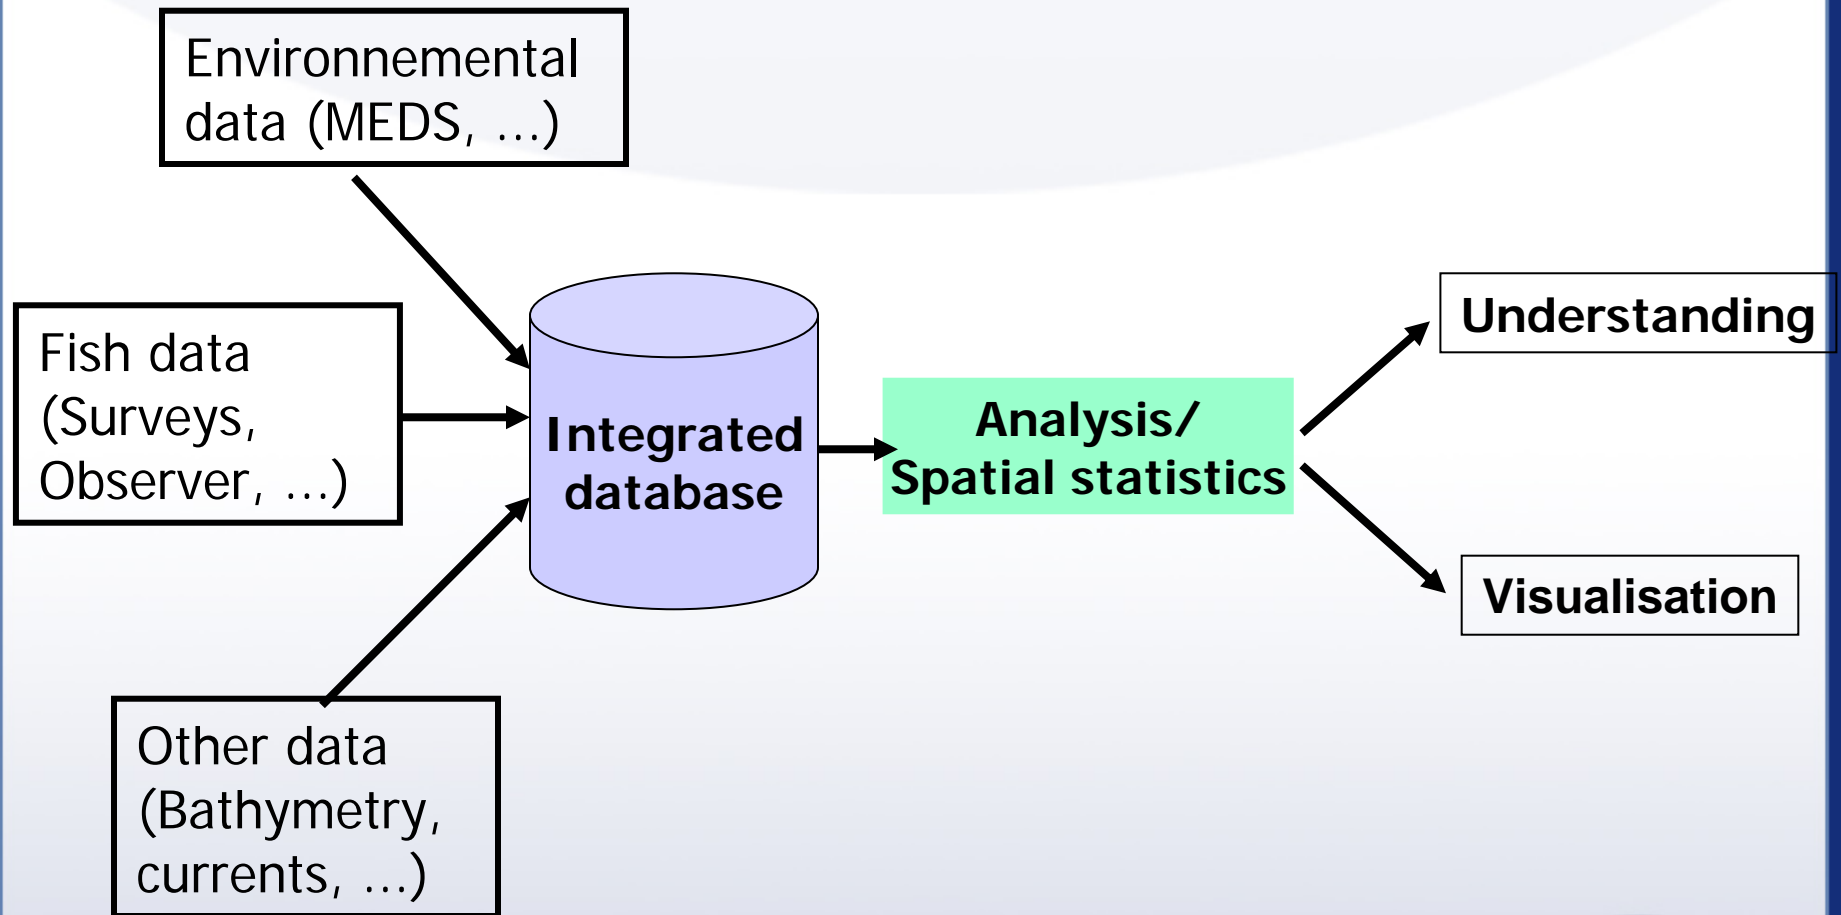

Objectives

1. To **integrate heterogeneous** fisheries and environmental **data into a single data model** that will be suitable for subsequent analyses and visualisation
2. To **use spatial statistics to analyze** the dramatic decline of groundfish (e.g. cod), distribution shifts of pelagic (e.g. capelin) and changes of snow crab and shrimp, and their interactions, **in relation to environmental and climate change**
3. To **develop spatio-temporal visualization tools** to help decision-makers gain better insight into dynamic relationships between species distributions/abundances and the environment

General approach

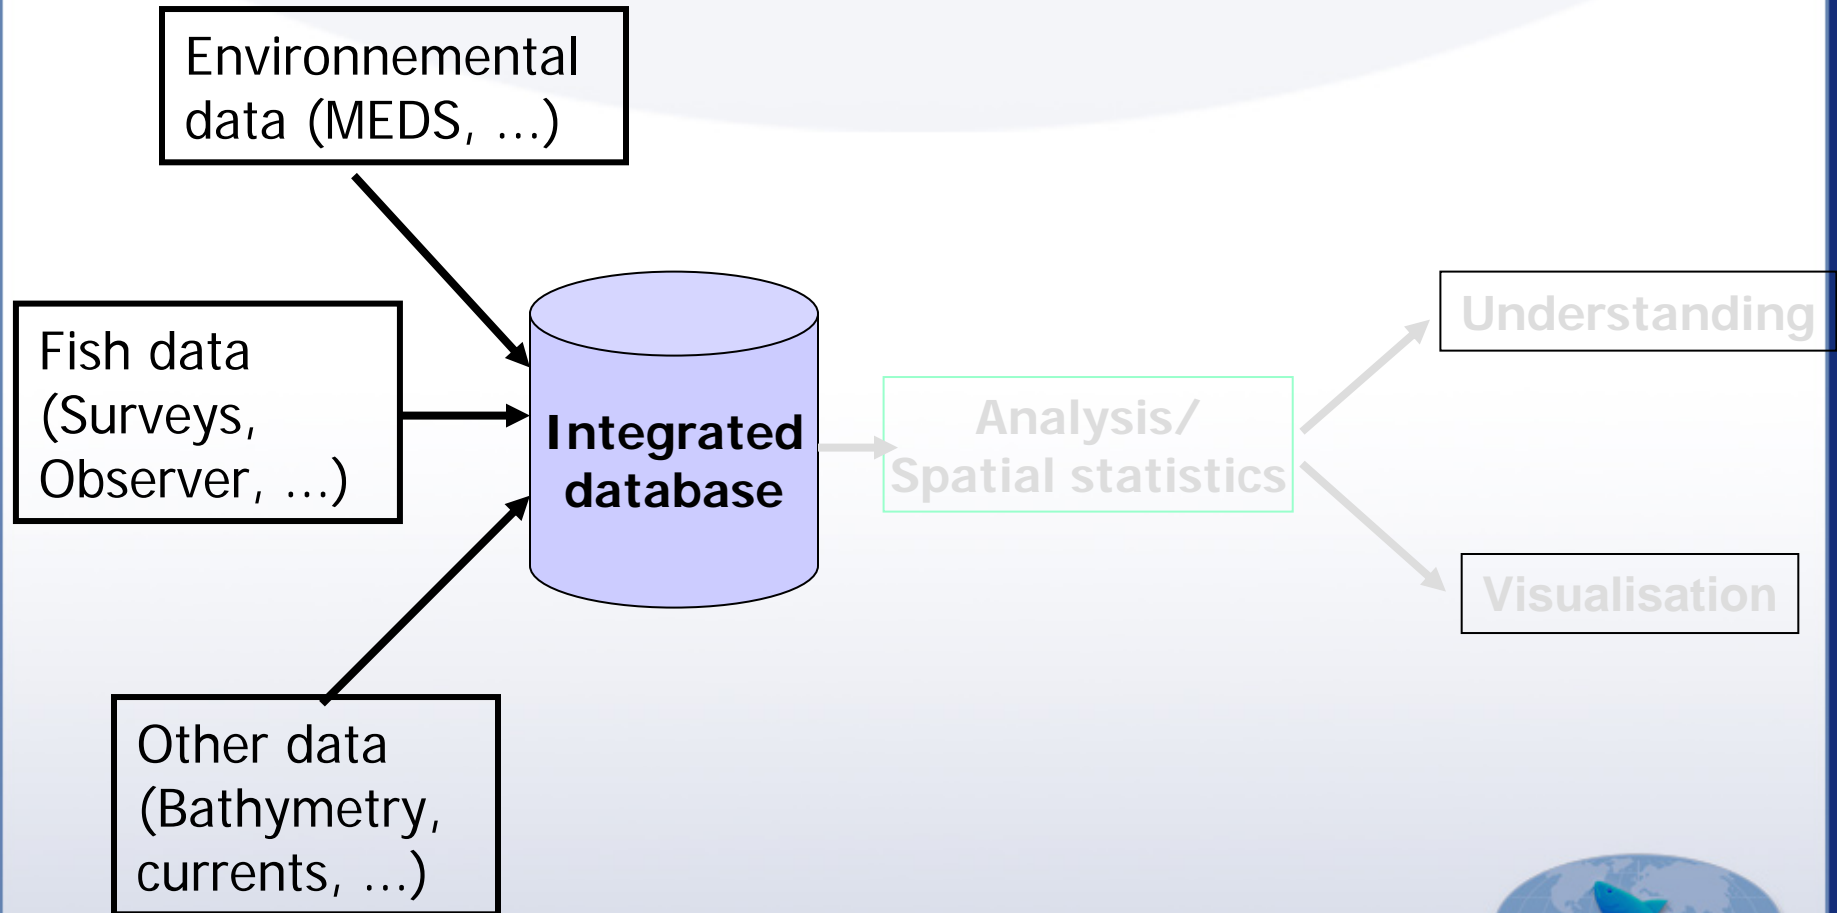

Collection

Integration/
management

Analysis

Visualisation

Memorial University

- 1:15-1:35 Rodolphe Devillers (Geography, MUN)
GeoCod integrated database of fisheries data (Cod, Shrimp, Crab and Capelin)

Collection

Integration/
management

Analysis

Visualisation

Environnemental
data (MEDS, ...)

Fish data
(Surveys,
Observer, ...)

Other data
(Bathymetry,
currents, ...)

Integrated
database

**Analysis/
Spatial statistics**

Understanding

Visualisation

U. of Toronto + Marine Institute

- 1:35-1:55 Randy McVeigh and Marie-Josée Fortin (Ecology and Evolutionary Biology, U. of Toronto)
Fisheries mapping and interpolation of catch data
- 1:55-2:15 Jonathan Ruppert (Ecology and Evolutionary Biology, U. of Toronto)
Spatio-temporal analysis of Atlantic cod distribution in the Northern Gulf of St. Lawrence using CART

1990

Spatial statistics

Understanding

Visualisation

Laval + Memorial

- 2:15-2:35 Valérie Carette and Mir Abolfazl Mostafavi (Géomatique, U. Laval)

Representation of fish aggregations and their spatio-temporal evolution according to the environmental parameters

- 2:35-2:55 Krista Jones and René Enguehard (Geography, MUN)

GIS-based fisheries data visualization tool

Conclusions

- We want to get the big picture, a first cut
- Innovations:
 - Integration of data from different DFO regions +USA
 - Analyses of long time-series
 - Use of spatial statistics
- We want to qualify and/or quantify the effects of
 - Fishing activities
 - Climate changes (Temperature, Salinity)
 - Main trophic changeson cod, shrimp, crab and capelin abundances and distributions
